

AN OUTDOOR STORAGE CONTAINER HAVING HINGED AND REMOVABLE LIDS

ABSTRACT OF THE DISCLOSURE

A multifunction storage container, for example, for outdoor use, is disclosed. The storage container includes at least one lid pivotably mounted to an end wall of the container and one or more removable centrally-positioned lids. The mounted and removable lids may function as covers for the storage container or may function as serving surfaces. In one aspect, the removable lid may be used as a serving tray. The container may be used for food or beverage storage and service and may also be used for storing articles, such as chair cushions or pool accessories. In one aspect, a hinge assembly is provided for pivotably mounting the lids. The container and hinge assembly may be made from wood, for example, cedar or teak, though other materials of construction may be used.
